

IBM WebSphere® MQ allows you to easily exchange information across different platforms, integrating existing business applications in the process.

EMS MQ Gateway is an off-the-shelf solution which will finally give you full EMS event tokens from all those business-critical MQ events that are suffering from a lack of visibility on the NonStop platform.

By using simple screens EMS MQ Gateway enables you to set up the rules by which MQ events will be converted into full EMS event tokens. The process is simple. You identify the portions of the MQ event you want to convert and then identify the conversion rules (what you want to keep from the original event and what you want in the new event) to create the new EMS message.

EMS MQ Gateway Key Features:

Converts existing MQ text tokens to full EMS events.

Differentiates between "identical" MQ events.

Allows MQ subsystem to be part of full object sets.

Can connect through to OpenView or Tivoli via (separate) certified SPI and TEC gateways.

Automated EMS template generator

Enables creation of new and discrete MQ events to match your service monitoring.

**EMS MQ GATEWAY - NO TRICKS, NO NEED FOR ANY OTHER ELEMENTS OF OUR SOFTWARE, JUST ALL YOUR MISSING MQ EMS EVENTS OFF THE SHELF NOW!!**

## COMPANY DETAILS

Insider Technologies Limited, Spinnaker Court, Chandlers Point, Broadway, Salford Quays, MANCHESTER M50 2YR
